## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

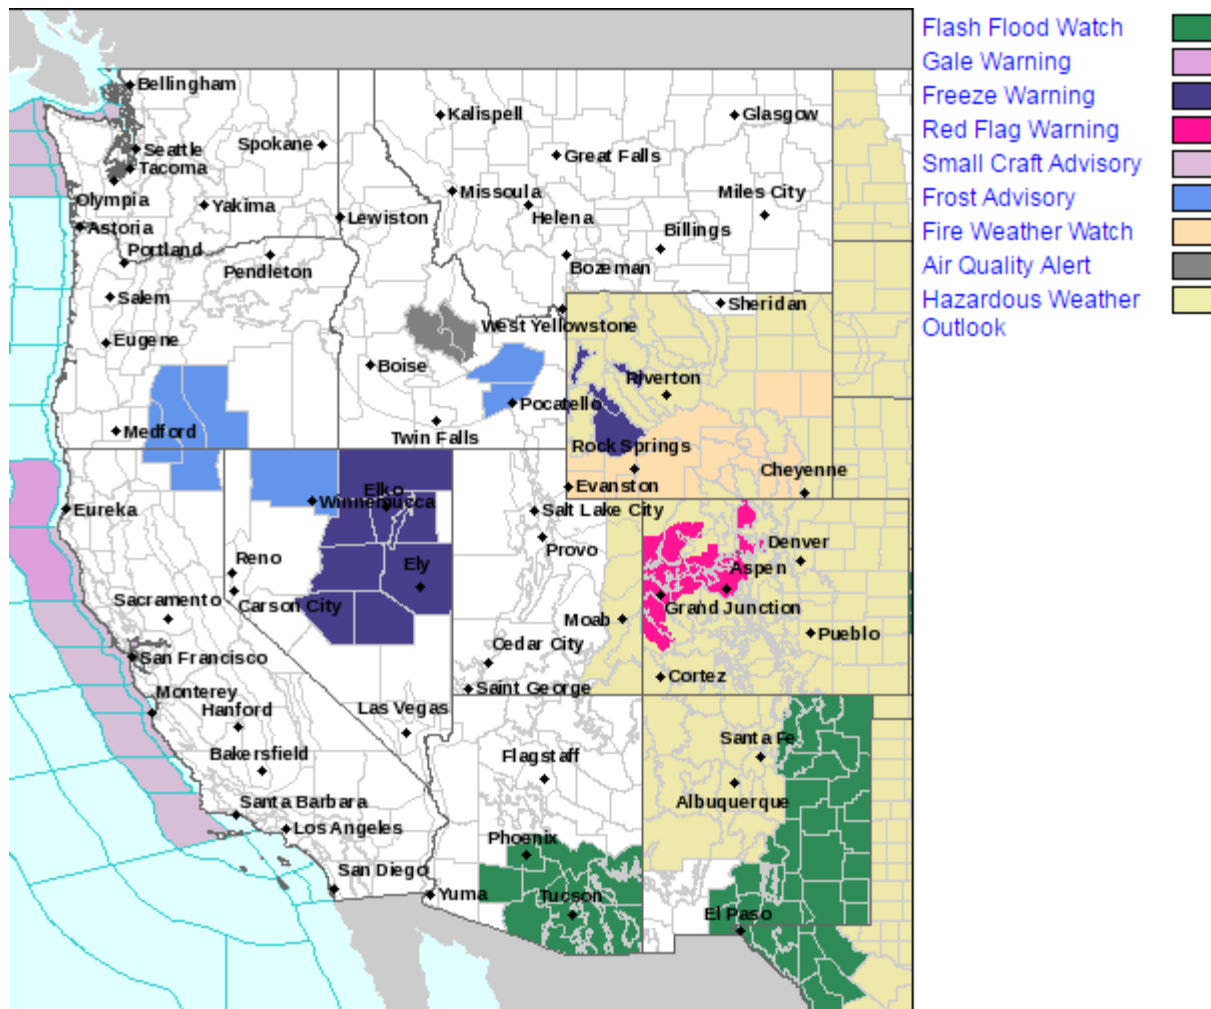

The low pressure through that has dominated Northern California weather for the past several days moved over the Great Basin yesterday. As it continues moving east this week strong high pressure over the Eastern Pacific will gradually have more influence over our weather. There will be a few scattered mid and high clouds in the north each day through Wednesday, but showers or thunderstorms are unlikely. By Wednesday the trough will be over the Rockies and a dry NW flow aloft will be over Northern California. A warming trend will bring afternoon temperatures up to near normal by Wednesday and above normal late in the week. A daily combination of night and morning N to NE downslope winds gusting to 20-25 mph with decreasing relative humidity (RH) recovery in the Sacramento Valley and adjacent foothills is the biggest fire weather concern developing this week. Gust speeds may locally reach 30 mph some mornings. RH recovery will be to 20-40% in and around the Sacramento Valley. Afternoon RH's all week will also be decreasing with fairly widespread values of 8-15% expected. Mid and upper slopes in far NW California will also experience periods of NE/offshore winds gusting to 20-30 mph and poor RH recovery during nights and mornings this week. The marine layer will gradually become more shallow, but still move into coastal basins and drainages from Mendocino or Sonoma County south each evening. Farther north, a stronger offshore push at times will keep the marine layer closer to the coast.

## **SOUTHERN CALIFORNIA**

Significant warming will occur today and Wednesday as high pressure builds into California from the Pacific. Temperatures will become near normal by Wednesday. The marine layer will shrink rapidly, with morning low clouds and fog only moving over the coastal areas by Wednesday. Minimum humidity will drop into the single digits and teens above and inland from the marine layer today and Wednesday. A weak low will form off the California Coast keeping temperatures near normal Thursday through this weekend. Minimum humidity will increase back into the 12% to 25% range Thursday through this weekend. Moisture from Tropical Storm Newton may bring isolated showers and thunderstorms to the Colorado River Wednesday, but most of the shower and thunderstorm activity with this tropical storm will stay to the east over Arizona.
